Backtracking in Recursion Java

Print all Permutations

Time complexity - O(n*n!)

```
public class Recursion3 {

public static void printPermutation(String str, int idx, String perm) {
    if(str.length() == 0) {
        System.out.println(perm);
        return;
    }

    for(int i=0; i<str.length(); i++) {
        char currChar = str.charAt(i);
        String newStr = str.substring(0, i) + str.substring(i+1);
        printPermutation(newStr, idx+1, perm+currChar);
    }
}

public static void main(String args[]) {
    String str = "abc";
    printPermutation(str, 0, "");
}</pre>
```

N-Queens

Time complexity - O(n^n)

```
class Solution {
   public boolean isSafe(int row, int col, char[][] board) {
      //horizontal
```

Apna College

```
for(int j=0; j<board.length; j++) {</pre>
          if(board[row][j] == 'Q') {
Apna College
```

```
Apna College
```

```
row = "";
      allBoards.add(newBoard);
  public void helper(char[][] board, List<List<String>> allBoards, int col) {
              helper(board, allBoards, col+1);
Apna College
```

```
public List<List<String>> solveNQueens(int n) {
    List<List<String>> allBoards = new ArrayList<>();
    char[][] board = new char[n][n];

    helper(board, allBoards, 0);
    return allBoards;
}
```

Homework Problems

- 1. https://leetcode.com/problems/permutations/ (Similar to print Permutations)
- 2. https://www.hackerrank.com/challenges/knightl-on-chessboard/problem (Similar to N-Queens)
- 3. https://leetcode.com/problems/sudoku-solver/ (Will be discussed in next class)
